

Modern Slavery Transparency Statement

We believe our role as a global company is to respect human rights around the world, both in our operations and by influencing our suppliers through our business relationships. Combating modern slavery requires persistence, ongoing due diligence, stakeholder engagement, and continuous improvement. This work is consistent with the core values on which HP was founded and strives to live up to each day: to create a positive, lasting and sustainable impact on the planet, our people and the communities where we live, work and do business.

The *California Transparency in Supply Chains Act of 2010*, the *United Kingdom Modern Slavery Act 2015*, and the *Australia Commonwealth Modern Slavery Act 2018* together require businesses to disclose information relating to their efforts to address the risks of modern slavery (including forced labor and human trafficking) in their operations and supply chains. The following statement of HP Inc. and its consolidated subsidiaries¹ responds to these requirements and outlines our efforts in this regard during the fiscal year ended October 31, 2021.

¹ HP Inc. and its consolidated subsidiaries share the same core business operations and supply chains as well as the modern slavery policies, processes and risks further described in this statement. HP Inc. therefore provides this statement for itself and on behalf of certain foreign subsidiaries that are directly covered by a disclosure obligation in their respective jurisdictions. Currently this includes HP PPS Australia Pty Ltd., pursuant to the Commonwealth Modern Slavery Act 2018, and HP Inc. UK Limited, pursuant to Section 54(1) of the UK Modern Slavery Act 2015. Through this statement, HP also satisfies its obligations pursuant to the California Transparency in Supply Chains Act of 2010. This statement excludes our subsidiary Apogee Corporation Limited (together with its subsidiaries), which intends to provide its own UK Modern Slavery Statement.

Our Business

HP is one of the world's leading IT companies. The company has operations in 58 countries and territories, with approximately 51,000 employees. Our Printing business provides consumer and commercial printer hardware, supplies, solutions and services, as well as scanning devices. Our Personal Systems business provides commercial and consumer desktop and notebook personal computers ("PCs"), workstations, thin clients, commercial mobility devices, retail point-of-sale systems, display solutions and peripherals, software, support and services.

HP Inc. is a corporation incorporated in the state of Delaware with principal executive offices in Palo Alto, California. HP Inc. and its subsidiaries operate worldwide and are collectively known as HP. A complete list of HP Inc.'s subsidiaries worldwide as of the end of its most recently completed fiscal year can be found as Exhibit 21 to HP Inc.'s Form 10-K, filed with the US Securities and Exchange Commission on December 9, 2021.

Our Operations and Supply Chain

From PCs to printers, HP's unique products require a vast network of suppliers and partners spanning six continents, over 41 countries and territories, and with over half of our manufacturing suppliers based in Asia Pacific. We have approximately 800 manufacturing suppliers and several thousand non-manufacturing suppliers that provide goods and services in support of our operations, and we disclose the names of our key manufacturing suppliers.

We utilize a significant number of outsourced manufacturers ("OMs") around the world to manufacture HP-designed and -branded products. This helps us maintain flexibility in our supply chain and manufacturing processes. In some circumstances, products designed and produced by third-party suppliers are sold under the HP brand. We also manufacture, or our OMs manufacture on our behalf, finished products from components and subassemblies that we acquire from a wide range of suppliers. We have direct business relationships with suppliers that represent up to four tiers of manufacturing, including materials, components, sub-assemblies, branded components, and final assembly suppliers.

HP's operations include some manufacturing as well as design and product development, supply chain management, marketing, sales, customer support and administrative operations. Our operations are supported by non-manufacturing suppliers that provide services and facility management.

Addressing COVID-19

The COVID-19 pandemic forced HP to rapidly reassess how we manage our operations and supply chain in order to address the severe risks of the disease to workers and communities. As many of our facilities across the world—particularly manufacturing sites—were deemed essential, it was critical for us to find ways to continue working while protecting worker health & safety. HP's response in a time of global crisis mirrors our commitment to respecting human rights: first we identified the risks to our employees and contingent workers (and our partners), then we acted decisively to manage and mitigate them. To help

keep our employees safe, we quickly pivoted the vast majority of our employees to work from home. For those in manufacturing and other critical functions that could not transition to a remote model, we quickly implemented safety and hygiene training and protocols, such as physical distancing, safety gear mandates, site visitor restrictions, alternate staffing shifts, and enhanced cleaning and sanitization practices, to protect the employees in our labs or manufacturing and production facilities. We have also implemented contact tracing initiatives.

The impact of the pandemic on travel and site access reduced the number of audits and assessments we were able to complete during the year. However, we remained in communication with our suppliers, and we found ways to safely conduct assurance activities with the use of in-person and remote audits and assessments. Our HP Supplier Code of Conduct has strict health and safety expectations, and we published best practice [guidelines for suppliers](#) to support the protection of their workers, to support work environment morale, and to assist workers to remain comfortable during these challenging times. HP continued to support suppliers with a global virtual training on mitigating the risks of forced labor and the impacts of COVID-19, discussing how travel restrictions and health fears could increase worker vulnerability. These engagements reached more than 1100 supplier managers and supervisors.

Our Policies

HP Governance

The Nominating, Governance and Social Responsibility Committee of the HP Board of Directors oversees human rights, including reviewing the results of our ongoing human rights assessments and approving HP's annual company-wide modern slavery statement.

HP's Chief Impact Officer and Chief Sustainability Officer oversee the implementation of our company-wide human rights commitments (found within our Human Rights Policy) and the design of processes to prevent, mitigate, and remediate related impacts, including any relating to modern slavery.

HP recognizes there are many business functions across the company that play a role in addressing modern slavery risks. The Human Rights Office engaged with the following business functions to prepare this statement: Human Resources, Supply Chain Operations, Logistics, Recycling Operations, Global Indirect Procurement and Global Legal Affairs. This consultation process has enabled a comprehensive and integrated, group-wide statement and was led by the Chief Impact Officer. The Human Rights Office, as the owner of the preparation of this statement, then works with our local senior management teams, in consultation with the boards of our subsidiary entities, as appropriate, to develop, adopt and approve statements that are responsive to local requirements.

We also convene a Human Rights Council bi-annually to review our ongoing human rights assessments and to develop plans for continuous improvement.

Integrity at HP

Respect for fundamental human rights is embedded in the Integrity at HP program, through which we apply strong ethics and anti-corruption principles within our operations, across our value chain, and in the communities where we do business. HP's Chief Ethics and Compliance Officer oversees the Integrity at HP program. We require ethical conduct by our employees and use our scale and influence to drive progress. We are committed to complying with all applicable laws and regulations everywhere we operate. This program helps integrate respect throughout our operations.

Human Rights Policy

Our [Human Rights Policy](#) defines our commitments and actions that guide the integration of respect for human rights into our operations, products, and supply chain. It includes our prohibition on forced labor within HP and includes requirements of our suppliers to adhere to the HP Supplier Code of Conduct and other implementing policies and standards.

Contingent Worker Code of Conduct

HP's [Contingent Worker Code of Conduct](#) applies to all non-employees performing services for HP on an HP site or who are the face or representative of HP to HP customers ("contingent workers"), and to suppliers of these workers. We expect suppliers and the workers they provide to share our commitment to conducting business with integrity. The contingent worker code is also applicable to HP personnel managing contracts with migrant workers. This code prohibits charging applicant or recruiting fees, and requires compliance with applicable employment standards, non-interference with identity documents or passports, and employees' ability to resign at any time (all local country legislation and Workers Council Agreements apply). Suppliers of contingent work and contingent workers themselves are also prohibited from engaging in trafficking in persons. Finally, the code requires that suppliers and contingent workers adhere to all relevant HP policies.

Supplier Code of Conduct

HP's requirements for all suppliers are contained in the [HP Supplier Code of Conduct](#), which incorporates international labor and human rights principles (and aligns with the Responsible Business Alliance ("RBA") code of conduct). HP has purchasing agreements or purchase order terms and conditions in place with our direct suppliers requiring them to comply with international standards and applicable laws and regulations regarding forced labor and human trafficking as specified in the HP Supplier Code of Conduct. HP's direct suppliers agree that their operations comply with these laws and regulations through their consent to the relevant terms and conditions in their agreements with HP.

The HP Supplier Code of Conduct expressly requires that suppliers ensure workers associated with HP services and production have: (i) the right to freely chosen employment; (ii) the right, in accordance with local laws, to join labor unions on a voluntary basis, to bargain collectively and to engage in peaceful

assembly; and (iii) the right to a workplace free of harassment and unlawful discrimination.

HP requires our manufacturing and non-manufacturing suppliers to require their next tier suppliers to acknowledge and implement the HP Supplier Code of Conduct and hand it down to their sub-tier suppliers. We also require suppliers to monitor the performance of their next tier suppliers against the requirements of the code.

Foreign Migrant Worker Standard

Foreign migrant workers are especially at risk for exploitative labor practices and forced labor. HP was the first technology company to set requirements for suppliers on how they recruit, hire, and manage such workers. Our [Supply Chain Foreign Migrant Worker Standard](#) requires direct employment of foreign migrant workers by our suppliers, as well as prohibiting retention of worker passports and personal documentation and requiring the elimination of worker-paid recruitment fees.

Risks of Modern Slavery

HP monitors the risks of modern slavery through our human rights assessments and due diligence program. Our human rights due diligence program considers our business activities and potential risks to rights-holders consistent with the UN Guiding Principles for Business and Human Rights. We consider risks in our operations (HP offices, HP manufacturing and distribution operations, and suppliers that support these operations) where we could cause or contribute to negative human rights impacts. We also consider risks associated with our manufacturing and non-manufacturing suppliers (operating in their own facilities) where we may be directly linked through a business relationship.

HP conducts human rights risk assessments to identify potential human rights risks that could be associated with the HP business models and operations. Historically, the potential for forced labor, debt bondage, and child labor were confirmed as salient human rights risks.

The following paragraphs characterize the different business contexts in which industry information and our past experience indicate that there could be a risk of modern slavery.

- In our operations, the risks of modern slavery are predominantly associated with the non-manufacturing suppliers supporting our offices (janitorial, facilities, security, etc.) or our HP-managed manufacturing operations. In the past, we have seen risks associated with foreign migrant hourly workers employed by our non-manufacturing suppliers. HP does not employ any foreign migrant hourly workers.
- In our supply chain, the risks of modern slavery are predominantly associated with manufacturing suppliers operating in countries where there is a high volume of foreign migrant labor and a lack of legal protections and/or enforcement of protections for migrant labor.

Specific risks of modern slavery associated with migrant workers at supplier sites include payment of recruitment fees, retention of worker passports, lack of an employment contract in a language the worker understands, and failure to provide return transportation to the country of origin.

- Risks of modern slavery can also occur deeper in our materials supply chain with entities that are more than four supplier actors removed from HP. In these instances, we align our practices with the relevant portions of international guidance, such as the Organisation for Economic Co-operation and Development's guidance on responsible minerals, and work with other companies to build leverage with intermediate actors deep in the supply chain. Through this work, we are able to influence business relationships with entities operating in challenging contexts to mitigate the risks of modern slavery, such as those associated with mineral extraction.

Risk Detection

Operations

HP maintains a strong culture of open communication. We encourage anyone with a concern to speak up without fear of retaliation. Multiple communication channels make it convenient for employees and other stakeholders, such as business partners and suppliers, to ask questions or report a concern to HP. At HP, we do not tolerate retaliation against anyone who raises a concern or question honestly and in good faith.

Investigations in response to grievances lodged are conducted in a comprehensive, objective manner, and are free from influence by management or the business. All investigations follow a process designed to ensure consistency and fairness. The investigation cycle involves interviews, formal reporting and recommendations under the oversight of Human Resources, Global Legal Affairs, and relevant senior management.

We include 100% of HP-managed manufacturing in our due diligence scope, as well as non-manufacturing suppliers that support these operations.

Supply Chain

HP considers its supply chain to include (i) suppliers who operate in their own facilities that contribute to manufacturing our products, and (ii) suppliers that provide outsourced services and products that support our operations (including logistics providers and recycling providers). HP's supply chain responsibility program focuses on protecting and empowering workers, which we believe creates benefits for us and our customers. With our supply chain policies and standards as a baseline, detecting and addressing the risks of modern slavery are part of a broader approach to identify and mitigate social and environmental concerns. HP works to identify and characterize sources of risk and their context, whether at a global or regional level or at the level of individual manufacturing and non-manufacturing suppliers.

A supplier self-assessment questionnaire is used to prioritize audits. If an audit is scheduled, it will evaluate the supplier's conformance to the HP Supplier Code of Conduct and/or specialized HP labor standards. Audits of certain high-risk manufacturing suppliers are conducted by independent third-party auditors through the [RBA Validated Assessment Program](#) or by certified HP auditors. For suppliers with identified non-conformances related to foreign migrant workers, we engage in quarterly monitoring to encourage continuous improvement.

While all suppliers are expected to meet - and may be required to demonstrate that they meet - the standards set forth in the HP Supplier Code of Conduct, we place special emphasis on the treatment of foreign migrant workers in our supply chain. To evaluate risks related to modern slavery and conformity to our Foreign Migrant Worker Standard, we analyze indicators such as the employment of vulnerable worker groups and the use of third-party agents in the recruitment or management of workers. Our manufacturing and non-manufacturing supplier risk assessment for foreign migrant workers considers supplier location, manufacturing process or services provided, supplier reputational and business information, and external stakeholder information. Typically, if the supplier is considered a high-risk supplier with whom we have a certain level of spend, we require the completion of a foreign migrant worker self-assessment questionnaire. For non-manufacturing suppliers, high-risk suppliers must complete a social and environmental responsibility risk assessment that addresses a subset of the HP Supplier Code of Conduct and always includes labor and ethics elements. For selected manufacturing and non-manufacturing suppliers with high risk, we conduct onsite assessments in conformance with our Foreign Migrant Worker Standard.

A finding of non-conformance with the HP Supplier Code of Conduct or any other HP policy or standard related to modern slavery does not necessarily indicate that an instance of forced labor has occurred but may signal a lack of operations or procedures to prevent such an occurrence. Following a finding of non-conformance, suppliers are required to produce and implement corrective action plans to resolve the issue. In addition, we regularly assess our audit findings to make improvements to our approach to detecting and addressing the risks of modern slavery in our supply chain.

Auditors are required to escalate any findings of indicators of modern slavery. Suppliers must immediately cease all practices contributing to a modern slavery audit finding and report their corrective action within 30 days following the audit. The finding will then be re-examined during a site visit by a third party or certified HP auditor to confirm resolution.

A multi-step process addresses remedy for workers that paid fees prohibited by HP policy, including the HP Supplier Code of Conduct, Contingent Worker Code of Conduct and Supply Chain Foreign Migrant Worker Standard. After the supplier is notified of the finding in the audit report, we work with the supplier to agree on a corrective action plan. Our program relies on our business relationship to drive suppliers to complete their corrective action plan. In parallel, our local auditing teams help provide the support and feedback suppliers need to achieve resolution and to reimburse the workers. We also work to build suppliers' capabilities through partnerships with external organizations. Suppliers are then able to conduct their own due diligence within their operations. This due diligence involves conducting worker interviews, reviewing documents, and researching migration costs as estimated by external organizations. Once they have confirmed payment to workers (usually via signed receipts or pay slips), HP schedules an onsite validation visit which

consists of document review and confidential worker interviews conducted by certified auditors. Finally, we take the additional step of internally monitoring these suppliers from non-conformance identification to corrective action and beyond through our quarterly key performance indicator program to ensure timely resolution and continuous improvement. We share this report with HP executives that manage the business relationship.

Any salient risks we have identified are communicated to the highest levels within our organization's global structure. A summary of any findings and corrective actions relating to modern slavery risks is reported to the Chief Impact Officer, Chief Sustainability Officer, and the HP Board of Directors' Nominating, Governance and Social Responsibility Committee and communicated to the boards of our subsidiary entities, as appropriate.

Effectiveness in Addressing the Risks of Modern Slavery

The impact of the pandemic on travel and site access continued to reduce the number of audits and assessments we were able to complete during the year. However, we remained in communication with our suppliers and we found ways to safely conduct assurance activities with the use of local in-person and remote audits and assessments.

Operations

With respect to HP's own operations, out of a total of 508 formal contacts received through our grievance mechanisms during fiscal year 2021, none were associated with modern slavery risks.

During fiscal year 2021, we conducted 37 audits and assessments covering labor rights, including some of our HP-owned manufacturing operations, which included associated non-manufacturing suppliers that support these operations. All audits and assessments were conducted with certified auditors and 63% were conducted by third party auditors. There were no priority findings associated with modern slavery. We believe these results can be attributed to the scale and coverage of our training program to address the risk of modern slavery in HP operations.

Supply Chain

We focus primarily on engagement with suppliers with whom we have a direct contractual relationship. We have multi-year agreements in place with many of our manufacturing and non-manufacturing suppliers. This allows us the opportunity to build supplier awareness and capability to meet our social responsibility expectations, including the implementation of and adherence to policies and processes to address the risks of modern slavery. These agreements require in turn that our manufacturing and non-manufacturing suppliers mirror our expectations with their suppliers.

We conducted 82 manufacturing supplier audits and assessments covering labor rights during fiscal year 2021, approximately 70% of which were audits

conducted by independent third-party auditors. For non-manufacturing suppliers that provide goods and services for HP at their own facilities, we conducted 28 audits, all of which were conducted by independent third-party auditors.

Three suppliers were found to have indicators of modern slavery. Two suppliers had charged recruitment fees, with one also withholding passports. A third supplier was found to have forced overtime and falsified related overtime records. We are requiring the issues to be immediately addressed and will work with the suppliers to provide remedy to the workers and implement corrective actions to adjust their management systems. Our annual Sustainable Impact Report for FY2021 (to be published in mid-2022) will summarize the manufacturing and non-manufacturing supplier audits for fiscal year 2021.

As a part of addressing priority findings, HP has confirmed remedy to more than 250 workers in our operations and supply chain including approximately \$0.4 million USD in repayments in FY21 addressing findings associated with modern slavery.

The HP Social and Environmental Responsibility Manufacturing Supplier Scorecard is used to measure and incentivize supplier performance on a range of factors including audit results and other performance metrics. Suppliers who have exceptional performance in these areas realize a benefit in their commercial relationship with HP. This process has enabled continuous supplier improvement. In fiscal year 2021, the scorecard was used to evaluate manufacturing suppliers representing approximately 76% of HP's manufacturing spend.

Other Initiatives

External Collaboration

Consistent with the United Nations Guiding Principles on Business and Human Rights, we work to build influence in our business relationships with suppliers by partnering with other peer companies and key stakeholders. We work through the RBA to create and share leading practices and programs to advance improvements to the RBA Code of Conduct and capabilities of its member suppliers.

HP serves on the steering committee of the RBA Responsible Labor Initiative, a multi-industry, multi-stakeholder initiative focused on ensuring that the rights of workers are consistently respected and promoted.

We seize opportunities to cooperate across the broader business community, for instance becoming one of the founding members of the Leadership Group for Responsible Recruitment, which is focusing on eradicating worker-paid fees.

Training

Our employees are trained annually on Integrity at HP, with a training completion rate of more than 99% of active employees. The training sets out our company expectation that all employees comply with Integrity at HP, which includes provisions prohibiting the use of child, prison, forced, or trafficked labor in HP operations.

We also seek to raise supplier awareness of and conformance to the HP Supplier Code of Conduct and specialized labor standards, including ways to identify and address the risks of modern slavery. HP's supply chain capability building program conducts regular workshops on the RBA Code of Conduct and educates suppliers on our Foreign Migrant Worker Standard. HP also continued to support MOVE, a multi-stakeholder initiative in Thailand which utilizes a mobile app and website to provide training and assistance to migrant workers from Cambodia, Laos, and Myanmar in order to mitigate risks of COVID-19 and employment exploitation.

Approval

Combating modern slavery is consistent with the core values on which HP was founded and strives to live up to each day: to create a positive, lasting and sustainable impact on the planet, our people and the communities where we live, work and do business. Learn more at www.hp.com/sustainability.
