Vivid Glass, Windows and Doors Pty Ltd	633 369 990
Viridian Glass Operations Pty Limited	004 158 909
SA Independent Glass Pty Ltd	008 285 532

Viridian is a privately held Australian company.

Viridian is committed to limiting the risk of modern slavery occurring within its own business, infiltrating its supply chains or through any other business relationship.

The related entities have a Director in common, and therefore Directors of all related entities have been consulted with in preparing this Modern Slavery Statement.

This statement is made pursuant to the Act and constitutes Viridian Glass' Modern Slavery Statement in respect of the 31 March 2025 financial year and is approved by its board of directors.

Neville Buch

Director, Viridian Glass Pty Ltd

Company Overview

As the largest glass processor in Australia, we demonstrate our passion by leading the industry for quality, innovation, and expertise. Every day, we strive to be the trusted glass partner to our customers – this is why we exist. It is a partnership based on reciprocal loyalty, open and honest communication, and regular positive engagement.

Structure & Operations

Operations

Viridian's core business is being a processor of float and laminate glass products across Australia. Additionally, our reporting entities perform window fabrication and glazing. Operations are in all states except WA, with varying capabilities at each site. Glass processing includes cutting, polishing, toughening, laminating and making Insulated Glass Units (IGU's). Window fabricating is the process of putting glass in frames, and glazing is the installation of glass, windows and doors. All processed products that Viridian sells are manufactured in our factories located throughout Australia.

Employees

Viridian employ ~690 people in Australia plus 11 contracted in Manila (Philippines). Processing operations and our workforce vary by state, with some sites operating 24 hours per day Monday to Friday and others 1 shift per day.

Supply Chain Structure

Viridian has a dedicated procurement function including the National Operational Excellence Manager, National Procurement Manager, Purchasing Assistant and Technical Manager - Quality. Glass represents 48% of our purchases, which are made predominantly through one supplier in Australia. The contract for this supply is negotiated jointly with our CEO and National Procurement Manager and includes activities on ensuring quality control and safe supply of products. On the 4th of February 2025, the sole manufacturer of glass in Australia was placed in administration, ceasing manufacturing on the 31st of March 2025. The National Procurement Manager commenced negotiations with overseas suppliers to ensure continuity of glass products, in addition to continuing activity for costs such as consumables and energy. Activities include identification and contracting for supply, quality assurance and audit where applicable.

Products and Services in Viridian's Supply Chain

Glass

During the year Viridian continued to source most of its glass from a local Australian Glass manufacturer. A portion of the glass used in production is not manufactured in Australia and is sourced from overseas (see table 1 below for detail).

Processing

Viridian and its subsidiaries source consumables and aluminium to be used in the production of IGU's, custom laminate and window or door frames. Other large production inputs include energy, maintenance consumables and spare parts for machinery. Many of these processing consumables and maintenance consumables/parts are manufactured overseas, sourced through both local and overseas suppliers. Our processing operations, fabricating and glazing all occur in Australia where we directly employ our workers in addition to using labour hire agencies when necessary.

Dispatch

Viridian uses a combination of direct employment of drivers and third-party logistics providers to deliver products between sites and to customers.

Risk of Modern Slavery Existing within Operations and Supply Chain

Viridian has assessed the risks of modern slavery in our operations and supply chains over the reporting period to consider the risk that we are causing, contributing, or directly linked to modern slavery practices.

Operations

We consider Viridian's manufacturing operations as low risk for modern slavery practices. This is because they are all

conducted in Australia and governed by an Employee Code of Conduct and Modern Slavery Policy which outline human rights considerations on site. These are underpinned by Viridian's Whistleblower Policy which supports the anonymous and protected reporting of any breaches. In addition, Viridian consults with Unions when negotiating EBAs for our processing sites.

The addition of Viridian's workforce based in the Philippines could be considered higher risk. To mitigate this, Viridian have engaged with a reputable labour hire agency in the Philippines to recruit and employ the workforce on our behalf. Work expectations and conditions of employees in the Philippines are the same as those in similar roles in Australia. Team leaders frequently visit the Manila office to ensure our high standard of working conditions are maintained.

Supply Chains

Viridians supply chain as of 31st March 2025 contains an overall risk profile assessed as low-med. Most products purchased from our Australian glass supplier were manufactured locally in facilities that comply with modern slavery requirements and with controls in place for their own operations to address Modern Slavery risks.

For products produced overseas, where possible, we obtained evidence that our supplier assesses and audits their overseas suppliers for compliance with Modern Slavery laws. Viridian worked closely with a few overseas suppliers to

verify their responses to our Anti-Slavery Questionnaire.

The change in supply chain of glass (the ceasing of manufacturing in Australia) will have a significant effect on the risk profile for glass and will require an increased amount of work to assess and maintain an acceptable level of risk in FY26.

The risks of modern slavery in the supply chain of production consumables have overall been assessed as low-med. The bulk of products are sourced from Australia, Europe and USA which are all considered regions of low risk. China and Korea are countries we source product from, and Viridian continue to work with suppliers to understand and reduce risk on a supplier-by-supplier basis.

Actions Taken to Assess and Address Modern Slavery Risks

Viridian understands that modern slavery in the context of business is a complex and global problem that may present in various forms. To actively identify and address modern slavery across its suppliers and employees, Viridian has taken the following actions:

Established Anti-Slavery Governance

The Executive Board has overall responsibility for enacting Viridian's Modern Slavery Policy and ensuring that Viridian complies with all its legal and ethical obligations.

The Chief Executive Officer (CEO) has the primary day-to-day responsibility for the

implementation of the Modern Slavery Policy, monitoring its use and ensuring that the appropriate processes and control systems are in place, and amended as appropriate, to ensure it can operate effectively.

Reviewed and Updated the Suite of Policies and Procedures and implemented compliance training

In prior years Viridian developed a suite of policies and procedures to measure and address risk of modern slavery in operations and supply chain, including

1. Establishing a **Modern Slavery Policy** which applies to all persons working for or on behalf of the Company, in any capacity, and sets out expected anti-slavery processes and behaviours including supplier relationships.
2. Implementing a **Whistle-blower Policy** which facilitates the disclosure of reportable conduct being made with full anonymity and outlines the protections afforded to the employee making the report.
3. Updating the **Code of Conduct**.
4. Implementing annual training and sign off to confirm compliance and understanding of the policies. This occurs annually in February.

Identified and Enacted Priority Actions

Through the course of the 2025 financial year Viridian implemented the following:

1. Where appropriate as informed by the risk assessment, Viridian engaged

directly with suppliers to gain a proper understanding of the measures they have in place to ensure that modern slavery is not occurring within their own business. This was extended to more suppliers throughout the year.

2. Ongoing reviewing of KPI's to measure the effectiveness of our actions.
3. Process implemented to revise contractual documentation to incorporate specific prohibition against slavery, servitude, the use of forced, compulsory or trafficked labour, and the use of child labour in line with Viridian policies.

Future Actions to Continue to Improve Modern Slavery Risk Management

Viridian will continue to advance its Modern Slavery initiatives through the financial year ending March 2026, as follows:

1. Perform detailed risk assessments and make decisions on imported Glass vendors
2. Expand risk assessment to understand mitigations from further up in the Supply Chain.

Assessing the Effectiveness of the Actions Taken

During the reporting period, Viridian continued the implementation of existing policies and risk assessments to ensure they are best practice. The KPI for returned self-assessment questionnaires improved in FY25 vs FY24 and KPI's for

completion rates of modern slavery policy & training sign off and the number of identified modern slavery cases remained ideal.

Viridian will continue to assess the effectiveness of its actions through:

1. Assessing the ability to remediate swiftly if an instance is found in supply chain
2. Investigate ways to assess risk by supplier, in the absence of self-assessment questionnaires being returned

Our Procurement team and CFO will continue to meet monthly to ensure this process is continually improving.
