

Modern Slavery

STATEMENT
2022

This Modern Slavery Statement (**Statement**) is made in accordance with the Modern Slavery Act 2018 (Cth) (**Act**) and submitted as a joint statement on behalf of the reporting entities outlined in Appendix One (collectively the **Nutrien Reporting Entities**). The Statement applies to, and outlines the steps taken, by the Nutrien Reporting Entities and their owned or controlled entities (collectively, **Nutrien Ag Solutions**) for the period of 1 January 2022 to 31 December 2022 (**Reporting Period**), to assess and address modern slavery risks in their operations and supply chains. References to "we", "us" or "our" in this Statement refers to Nutrien Ag Solutions, unless stated otherwise.

1. Introduction

At Nutrien, we recognise that Modern Slavery can occur in many forms, including indentured servitude, human trafficking, forced marriage, forced labour, debt bondage, child labour, and deceptive recruiting for labour or services (**Modern Slavery**). We understand that the private sector, along with other stakeholders, plays a key role in the fight against modern slavery and that the Act encourages businesses to assess and address Modern Slavery risks in their operations and supply chain.

The purpose of this Statement is to outline our approach to ensuring we have robust frameworks and processes in place to minimise the risk of Modern Slavery in our operations and supply chains. This is Nutrien Ag Solutions' third Modern Slavery Statement in response to the Act and our focus during the Reporting Period and in the period leading up to the publication of this Statement has been to consolidate and build on the progress made during the prior period of 1 January 2021 to 31 December 2021 (**Prior Reporting Period**). In this Statement, Nutrien Ag Solutions describes the status of the initiatives and risk mitigation measures commenced in the Prior Reporting Period, identifies the new measures and activities introduced since the publication of the 2021 Modern Slavery Statement (**2021 Statement**) and highlights new and expanded initiatives it will undertake in future.

We are committed to identifying Modern Slavery risks and addressing those risks via a process of continuous improvement and collaboration with all relevant stakeholders.

In addition, Nutrien is committed to respecting and observing all human rights, in accordance with applicable law and the principles set forth in international standards, including the Voluntary Principles on Security and Human Rights and the core conventions of the International Labour Organisation and the United Nations (**UN**), such as the UN's Declaration of Human Rights, the UN's Declaration on the Rights of Indigenous Peoples, and the UN's Guiding Principles on Business and Human Rights.

Nutrien promotes integrity, teamwork and professionalism across all our operations and partnerships, and is guided by the following principles:

- Support the physical safety and health, psychological safety and mental wellbeing of our employees
- Actively strive to minimise our environmental footprint, including waste and emissions
- Complying with all applicable employment and human rights laws in any jurisdiction where we do business and promoting respect for the rights, culture, diversity and dignity of all individuals
- Being an active and contributing member of each community in which we do business and creating long-term, mutually beneficial relationships with our communities

2. Group Structure, Operations and Supply Chain

Group Structure

The Nutrien Reporting Entities are Australian subsidiaries of Nutrien Ltd. (TSX & NYSE: NTR) (**Nutrien**). Nutrien is a global provider of crop nutrients, inputs and services. Nutrien is a diversified and integrated company operating potash, phosphate and nitrogen facilities predominantly in North America and Canada and has a strong distribution network of over 2000 retail outlets located across seven countries in Canada, USA, Australia, Brazil, Argentina, Chile and Uruguay.

Nutrien's Australian business, which includes the Nutrien Reporting Entities, has been servicing the Australian agricultural industry for generations. This historical experience has made us specialists in a range of different farming areas, including precision farming services, marketing livestock and wool, agricultural services, water, finance, insurance, merchandise and real estate.

In October 2019, Nutrien acquired Ruralco Holdings Limited, a diversified agricultural company, and rebranded its Australian business as Nutrien Ag Solutions. As a result of the acquisition, Nutrien Ag Solutions now has a network of 560 corporate-owned stores, 535 independent rural supplies retailers, a proud network of joint ventures and partnerships and a suite of other businesses.

Nutrien also has a number of non-controlling investments in key Australian agricultural businesses, including 50% interests in:

- **AuctionsPlus Pty Ltd** - a market leader in providing online services for the buying and selling of livestock and wool via on-line auctions
- **AWH Pty Ltd** - a leading Australian wool and independent cotton handler and one of Australia's leading general warehouse and specialist logistics providers
- **Nutrien Harcourts Pty Ltd** - a leading provider of real estate services in regional and rural Australia, through a franchised network of real estate agencies

Operations

Appendix One lists the Nutrien Reporting Entities and provides an overview of their structure and operations. These entities function as an integrated rural agribusiness operating in all states and territories of Australia and, collectively, they provide customers with complete agriculture solutions including farm inputs, farming merchandise, water and irrigation services, digital solutions, agronomic and farm planning advisory services, wool-broking services, livestock and rural real estate agency services, also insurance broking services and financial products.

What we do

Farm Inputs

We develop and manufacture our proprietary crop protection, plant nutrition and animal health products here in Australia. With facilities in Kwinana (Western Australia) and Dandenong (Victoria), we are proudly investing in Australian jobs and infrastructure to ensure farmers have certainty of supply and quality. We also work with our key suppliers to source a wide range of inputs from seed and fertiliser to animal health products and fencing to provide the solution to every farming challenge.

Wool & livestock

Every year, Nutrien Ag Solutions helps facilitate the sale of around 400,000 bales of wool, 2.5 million cattle and 10 million sheep, which in turn helps feed and clothe communities right across the world.

Digital Solutions

We are investing in online platforms to give farmers an efficient and reliable way to access products and information via smart devices, at any time and from anywhere.

Professional Services

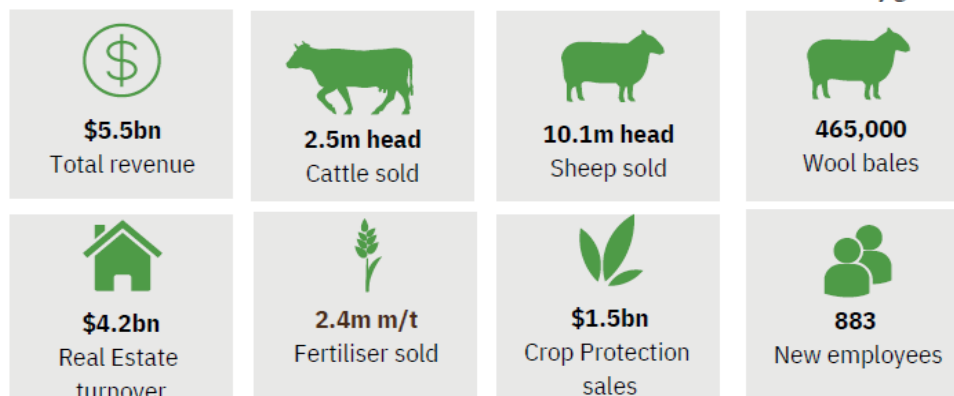

We support Australian agriculture in times of need and in times of prosperity, through our industry-focused insurance products, finance options and real estate services.

Water and Irrigation

Water is vital in farming and we support some of Australia's largest irrigation projects with advice, planning and construction, including almond farms in Victoria and pastoral stations in Western Australia. We are also an experienced water broking business assisting growers in managing and optimising their water assets.

2022 BUSINESS ACTIVITIES

NOTE: All figures in AUD

Nutrien Ag Solutions employs approximately 3755¹ people across Australia. These employees work across the network in areas such as agronomy, animal health, merchandise, livestock, logistics, and also in corporate functions such as finance, human resources, information technology, internal audit, procurement, proprietary product research and development, legal, retail, safety and risk, strategy and corporate development, customer and business services and government and industry affairs.

Our headcount by employment type² is set out below:

Employment Type	# of Employees
Permanent Full/Part Time	3052
Fixed Term Full/Part Time	35
Leave of Absence	58
Casual	610

Supply Chain

The Nutrien Reporting Entities procure products and services from several countries across the world. These products and services generally fall into three categories as set out below:

1. Products sourced for resale

The Nutrien Reporting Entities collectively procure a wide variety of goods for resale in their ordinary course of business operations, including from one or more of the types of goods or services listed below. The Upstream Companies (see Appendix One) procure more limited goods and services given the nature of their corporate function.

2. Products and Services sourced for internal use

The Nutrien Reporting Entities also procure goods and services to support their effective operations, including, for example, the follow:

Type of goods / service	Description
Merchandise products	Crop protection chemical products, animal health chemical products, fencing and agricultural equipment, seed
Fertiliser (includes bulk fertiliser, plant nutrition and speciality fertiliser)	Acquired for retail sale to end-users
Raw materials/chemicals	Used in manufacture and formulation of animal health, plant nutrition, adjuvants, crop protection products for retail sale to end-users

¹Figures up to date as of 19 June 2023.

²Figures up to date as of 19 June 2023.

Type of goods / service	Description
Office equipment / consumables	Coffee, tea, other beverages, cleaning products, office furniture, printing, stationery, uniforms
Technology and IT	Electronics, tablets, laptops, desktops, mobile phones
Transport	Vehicles, communications service providers, forklifts, plant and equipment (loaders, skid steers, headers etc.)
Contractors / third parties	Independent agents/ contractors engaged to provide the following services to customers on behalf of Nutrien Ag Solutions including information technology services, livestock and real estate agency, wool broking and storage and handling, insurance, agronomic advice, seed cleaning and coating, seed and fertiliser spreading
Professional services	Auditors, tax consultants, legal advisors, environmental consultants, safety advisors, workers compensation advisors, architects, fire engineers, building surveyors
Facilities management	Cleaning, security, premises
Utilities	Power, water, gas

3. Other

The Nutrien Reporting Entities also procure other goods and services ancillary to their operations.

Type of goods / service	Description
Drum services	Transportation and cleaning of company owned and recyclable drums
Trial collaborators	Third party laboratory service providers engaged for the purposes of product testing and trials
Network transportation	Engagement of third-party transport service providers for the transportation of various finished goods to Nutrien Ag Solutions retail network and Loveland distribution centres

3. Modern Slavery Risks in our Operations and Supply Chain

Risk Assessment

In the lead up to the publication of this Statement, including during the Reporting Period, our risk assessments included (but were not limited to) the following actions:

- Consideration of the latest advice from government and key industry associations on Modern Slavery control measures.
- A focused, risk-based, assessment of our supplier base taking into account factors such as sector or industry risk, geographic locations, business models and the presence of potentially vulnerable groups within our operations and supply chains.
- A review of our recruitment, employee engagement (including training) and remuneration practices.
- A review of our risk management infrastructure including, but not limited to, applicable governance bodies, policies, procedures and legal obligations.
- Review of information lodged via our various grievance or whistle blower mechanisms and identifying any patterns that could point to Modern Slavery risks within our operations and supply chains.

Potential Risks in our Operations

As a result of our risk assessment, we consider that the risk of Modern Slavery occurring within the operations of the Nutrien Reporting Entities and their owned or controlled entities to be low overall. Employees of Nutrien Ag Solutions operate in Australia only, which is considered to be a low prevalence jurisdiction for Modern Slavery risk according to the Global Slavery Index (GSI³). Relevant staff are provided training on Modern Slavery risks, with all new starters to be provided training during induction, and based on our regular reviews of remuneration, staff are appropriately remunerated. Although there are subsidiaries of Agrium Asia Pacific in Latin America, they do not employ individuals and therefore, such legal entities do not affect our overall assessment of risk in respect of our personnel.

A small segment of our business employs people to assist with livestock mustering, irrigation construction and support as yard hands. These roles are typically considered to require skill based labour, and, in these types of circumstances, potential Modern Slavery risks may generally arise:

- from the recruitment of vulnerable worker groups, including migrant workers and itinerant workers including backpackers and international students;
- where employment contracts are not provided in a language in which workers can understand and/or where the worker has equal rights to terminate;
- where passports of workers are retained; or
- recruitment fees are charged to workers.

³ All references in this Statement to higher risks associated with certain countries refer to the studies published by the GSI.

Many of the abovementioned potential risks may become acute where there is a reliance on labour hire for the provision of personnel. However, most of the personnel of Nutrien Ag Solutions are employed directly on a permanent or casual basis, through standard contracts of employment. These contracts of employment are administered centrally by the Nutrien Ag Solutions Human Resources Team. We also consider that the risks are mitigated by virtue of the employment processes that are detailed in section 4 below.

We recognise that there is a potential risk that Modern Slavery may exist in the operations or supply chains of companies we invest in. We have introduced Modern Slavery considerations when assessing investment opportunities. Where we invest in a company we do not control, we assess Modern Slavery risk at a broader level as part of our pre-investment due diligence. This includes requesting from the company, the processes and procedures that the company has in place to address Modern Slavery risk in its operations and supply chains. If we become aware of any material Modern Slavery risk in the company following our investment, we will appropriately address such risk with the company.

Potential Risks in our Supply Chain

Certain manufacturing regions and materials carry higher risk of Modern Slavery by virtue of the prevalence of Modern Slavery in particular countries. There are also risks linked to certain industries such as manufacturing and agriculture even in countries considered to have lower risks of Modern Slavery. We recognise that a large number of our direct suppliers are likely to rely on extensive global supply chains for the goods and/or services provided to us which makes it particularly challenging for us to have direct and meaningful visibility across our supply chain beyond the first tier.

1. Procurement of Goods

The Nutrien Reporting Entities recognise that their supply chains are complex and multi-jurisdictional. Potential Modern Slavery risks may arise in respect of procurement from the following categories by virtue of the industry risks and country of origin risks:

Category	Description
Supply of rural and general merchandise products	Merchandise goods which are procured by the Nutrien Reporting Entities as fully developed products are largely imported, particularly from China.

Category	Description
Proprietary ("in-house" brands)	<p>Within Australia, Nutrien Ag Solutions has two manufacturing sites (Kwinana in Western Australia and Dandenong in Victoria) where products for our "in-house" brands are manufactured. Products for these brands are also manufactured in a number of jurisdictions. For example, during the Reporting Period, there were 471 suppliers for Loveland AgriProducts across the following countries:</p> <ul style="list-style-type: none"> • Australia • India • Italy • China • United Kingdom • Unites States of America <p>Within Australia, Nutrien Ag Solutions has control over the operations and working conditions in our manufacturing sites and places of business. Historically, we would periodically travel to overseas sites to inspect operations of our suppliers in a risk-based manner, but due to travel bans arising from the COVID-19 pandemic, we were unable to engage in direct oversight inspections at such overseas sites during the Reporting Period. We recognise that reduced direct oversight increases the potential for Modern Slavery risk to occur unmitigated, especially where complex supply chains are involved.</p>
Fertiliser	<p>A key area of Nutrien Ag Solutions' operations that presents a higher potential risk, is the fertiliser business. During the Reporting Period, Nutrien Ag Solutions sourced fertiliser directly from the following countries: China, Germany, Canada, Saudi Arabia, Russia, United States, South Korea, Hong Kong, Malaysia, Indonesia, Belgium, Taiwan, Brunei, Israel, Netherlands, Poland, Chile and Singapore, each in compliance with applicable laws. Nutrien Ag Solutions also purchases fertiliser in Australia, much of which originates from both the above locations and others from time to time. Some of the above countries are associated with higher Modern Slavery risk.</p>
Crop Protection	<p>Nutrien Ag Solutions' crop protection suppliers are likely to source crop protection products, components and/or chemicals from overseas including from higher risk countries increasing the risk of Modern Slavery in our supply chain.</p>
Fencing	<p>Approximately 50% of products in this category are sourced from suppliers that manufacture fence products in Australia from Australian steel and timber. The remaining 50% of products are sourced from suppliers that import finished goods from around the world.</p>

Category	Description
Animal Health	<p>There are two distinct animal health product types:</p> <ul style="list-style-type: none"> our major suppliers of pharmaceutical type animal health products are all multinational suppliers with significant global interests and are likely to source animal health products, components and/or chemicals from overseas including from higher risk countries increasing the risk of Modern Slavery in our supply chain; and animal nutrition and feed type products make up approximately 40% of the animal health category. Almost all of the products supplied in this category are manufactured in Australia largely from Australian ingredients. Many of the suppliers are small regional businesses supplying stores locally.
Seed	<p>Many of Nutrien Ag Solutions' seed suppliers are Australian based companies with Australian based seed production. There are, however, some multi-national companies that supply to Nutrien Ag Solutions and may have seed breeding and production operations in higher risk countries that increase the risk of Modern Slavery in our supply chain.</p>

Since the acquisition of Ruralco Holdings Limited, Nutrien Ag solutions has worked to streamline and harmonise supplier agreements by engaging key suppliers through national level agreements. As a result, in most cases, all Nutrien Reporting Entities engage with key suppliers under master supply arrangements.

2. Procurement of Services

Our risk assessment has demonstrated that Modern Slavery risks may arise in respect of procurement from the following services:

Category	Description
Cleaning	<p>Cleaning has been identified as a higher risk industry for a number of factors, including but not limited to, the higher proportions of vulnerable workers in the industry and because these services are often performed by sub-contractors in complex arrangements. In 2022, the engagement of cleaning services remained at the heightened level as result of the COVID-19 pandemic. We recognise that this may have increased our exposure to Modern Slavery risks in our supply chain.</p>
Labour hire	<p>The risks of Modern Slavery rising from labour hire in the Australian agricultural sector have been publicised in recent years. There have been reports in the media of lower skilled workers placed via labour hire agencies on farms and construction sites where workers were found to have been working in conditions akin to Modern Slavery. However, this is not considered a risk for our own operations, given the Nutrien Reporting Entities only supply goods and services to participants in the agricultural sector, and is not a primary producer itself.</p>

Category	Description
IT	<p>The Nutrien Reporting Entities identified 80 suppliers of goods and services related to IT-related goods and services, 40 of which have off-shore operations⁴. In relation to IT products such as laptops and smart phone batteries, there are known risks associated with the mining and production of minerals such as cobalt and lithium that have been associated with high risk mining practices and human rights issues. There has also been risk reported in connection with the manufacture of some technology hardware. Such risks are common to any company that uses these goods and services regardless of their industry or geographic location.</p>
Shipping and logistics	<p>Modern Slavery risks have been highlighted in recent years in relation to the shipping industry in particular. Note that we conduct appropriate supplier due diligence, including for example for shipping companies that deal with fertiliser imports and other transportation of goods inbound.</p>

⁴Figures up to date as of 29 June 2023.

4. Addressing Modern Slavery risks in our operations and supply chain

In the Prior Reporting Period, the Nutrien Reporting Entities undertook several key actions to address the potential risk of Modern Slavery in our operations and supply chain, as follows:

- conducted a pilot program of supplier due diligence utilising our newly implemented, cloud-based platform to assess core Modern Slavery risks in our supplier relationships and collaborate with suppliers and other stakeholders via a process of continuous improvement;
- further refined a Modern Slavery questionnaire to enable us to better assess our suppliers for Modern Slavery risk, as well as expanding the scope of the questionnaire to assess broader concerns such as key legal risks and environmental concerns; and
- commenced the design and implementation of a continuous improvement program with our supplier base, utilising the results of risk assessments to determine key areas for improvement and utilising our technology platform as a means to efficiently communicate and encourage change.

The Nutrien Reporting Entities have continued their commitment to addressing Modern Slavery risk in the current Reporting Period and in the lead up to the publication of this Statement, through building on, and expanding, these activities with a view to embedding them in Nutrien Ag Solutions' broader risk management frameworks:

- the implementation of the cloud-based platform has continued, expanding in scope beyond the core Modern Slavery risks to include a broader multi-risk management approach incorporating such additional risks as trade sanctions and anti-bribery and anti-corruption. This multifaceted approach enables Nutrien Ag Solutions to take a holistic view of its relationships with key stakeholders such as suppliers;
- a successful pilot program of Nutrien Ag Solution's Modern Slavery supplier questionnaire has been completed, involving 272 of Nutrien Ag Solutions' key suppliers utilising the above platform;
- the pilot program represents the first step in the staged roll out of Nutrien Ag Solution's Modern Slavery supplier questionnaire which will be deployed according to pre-determined, risk-based criteria which includes Modern Slavery risk, supplier spend, type of goods or services, supplier reputation and country of origin;
- a program of continuous improvement has been piloted utilising the bespoke Modern Slavery platform, allowing Nutrien Ag Solutions to monitor, track and encourage suppliers to uplift their Modern Slavery compliance measures via the introduction or amendment of specific actions over a 12 month period;

Further to the activities described above, Nutrien Ag Solutions has implemented a number of additional Modern Slavery initiatives during the Reporting Period, and in the lead up to the publication of this Statement, spanning multiple functions, including:

- commencing a wholesale review of its procurement policies and procedures to uplift and improve all aspects of risk mitigation and ensure that Modern Slavery is appropriately covered;
- the introduction of a Modern Slavery training module applicable to all new Nutrien staff requiring those staff to review and acknowledge Nutrien Ag Solutions' Modern Slavery Statement. A detailed and bespoke training module has also been developed and implemented for senior staff members requiring a detailed understanding of Modern Slavery risks and key compliance measures;

In our operations

The Nutrien Reporting Entities have a number of controls and processes in place to assess and address the risk of occurrences of Modern Slavery. The measures described in this section 4 are applicable to the Nutrien Reporting Entities and our owned or controlled entities.

1. Governance and Policies

The Nutrien Ag Solutions Corporate Integrity Committee (**Committee**) was established to assist Nutrien Ag Solutions management to identify and manage risk, compliance obligations and related issues.

The Committee is multi-disciplinary, with members drawn from each key business unit and function, including safety and risk, human resources, finance, internal audit, IT, procurement, fertiliser, and legal.

In the 2021 Statement, we noted that the Committee plays a role in considering the Modern Slavery risks in each key area of our supply chain while also serving as a forum for developing the Modern Slavery compliance program and assisting to implement new initiatives such as the third-party platform (further described below). This responsibility was formalised in an amendment to the Committee Charter to expressly include Modern Slavery as an area of responsibility and oversight and Modern Slavery is a standing item at each meeting of the Committee.

Globally, Nutrien's Integrity Program provides the knowledge and tools for all Nutrien employees to achieve business results the right way – with integrity. This program consists of four pillars (risk intelligence, learning, speaking up and investigations) and is headed by the Integrity Group, which is part of the Legal Department.

All Nutrien Ag Solutions employees are bound by the global Nutrien Code of Conduct, which is publicly available [here](#). The Nutrien Code of Conduct describes how all employees fulfil their ethical responsibilities by:

- Committing to the public and our stakeholders our uncompromising integrity in every aspect of our efforts.
- Describing how we will do business the right way and our fundamental respect for the rule of law.
- Guiding employees how to engage in decision making that demonstrates and sustains our commitment to integrity in all our operations around the world.
- Outlining how our commitment supports our stakeholders – employees, customers, suppliers, competitors, governments, communities, and shareholders.
- Explaining how other entity-level policies connect with our Code of Conduct.

2. Training and Capacity Building

As described in the 2021 Statement, training on the Code of Conduct is compulsory for all employees of Nutrien and its affiliates, world-wide, including the Nutrien Reporting Entities and their majority owned or controlled entities. Each employee must complete the training as part of their induction and on boarding process and again on an annual basis. The Code of Conduct training is conducted via an online training module and is interactive with questions to ensure that the employee completing the training demonstrates an understanding and comprehension of the training material. Employees receive other training relating to the Code of Conduct over the course of the year, some of which is in person or via webinars.

To complement the Code of Conduct training, a mandatory Modern Slavery Statement training module will be provided to all new staff during induction which requires them to review and acknowledge Nutrien's Modern Slavery Statement.

During the Reporting Period, a bespoke and interactive Modern Slavery training module was developed and implemented for all senior staff members (currently focused on managers and above as well as all procurement employees), requiring completion of the following learning objectives and mandatory assessment:

- define Modern Slavery and identify why we have a Modern Slavery Statement;
- identify and address Modern Slavery risks in Nutrien Ag Solutions' operations and supply chain;
- the process of assessing the effectiveness of Nutrien Ag Solutions' actions to prevent Modern Slavery; and
- identify who to ask for more information and help if needed.

The longer form training module will be refined and updated for broader deployment during the course of 2023.

3. Reporting Mechanisms

Nutrien has a global, "speaking up" process that includes a web and phone-based Integrity Helpline that employees can use (including on an anonymous basis, if so desired) to report to Nutrien's Integrity Group any concerns regarding a breach of the Code of Conduct or legal requirements. The Nutrien Ag Solutions Whistle-blower Policy, which applies to the Nutrien Reporting Entities and their owned or controlled entities, provides information to eligible whistle-blowers and employees of Nutrien Ag Solutions about the types of disclosures that constitute 'protected disclosures' under Australian whistle-blower laws and encourages people to report unethical or illegal behaviour without fear of retaliation.

We take all reports very seriously. As mentioned above, these reporting channels are monitored closely by the Integrity Group. If, hypothetically, we found through an investigation that our business had caused or contributed to Modern Slavery, we would seek to remediate the impact by implementing an appropriate corrective action plan.

4. Employee Recruitment and Remuneration

The Nutrien Reporting Entities have processes in place to ensure compliance with applicable workplace relations laws and regulations. Our recruitment processes ensure that all recruitment is consistent and fair and in accordance with Nutrien's core values of safety, inclusion and integrity. Checks are undertaken during the recruitment process to verify age and rights to work.

In our supply chain

1. Supplier Due Diligence Processes

As described in the 2021 Statement, Nutrien Ag Solutions' prior approach to supplier due diligence was a two-tier approach, incorporating the following requirements:

- all Nutrien Ag Solutions overseas bulk fertiliser suppliers are required to undergo an enhanced due diligence analysis utilising the Dow Jones Risk & Compliance program and financial stability checks; and

- outside of this requirement, all divisions of the business are expected to follow a risk-based approach when deciding what type of due diligence to conduct on a supplier, based on factors including the type of goods or services, supplier reputation and supplier country of origin.

During the Reporting Period, and in the lead up to the publication of this Statement, Nutrien Ag Solutions commenced:

- a piloted roll out of the Modern Slavery supplier questionnaire on the basis of pre-determined, risk-based criteria which include Modern Slavery risk, supplier spend, type of goods or services, supplier reputation and country of origin. Over 250 suppliers participated in this program;
- a test program of continuous improvement leveraging the results of the pilot supplier questionnaire program and utilising the cloud-based platform, allowing Nutrien Ag Solutions to monitor, track and encourage suppliers to uplift their Modern Slavery compliance measures via the introduction or amendment of specific actions over a 12 month period; and
- a review of its supplier due diligence requirements across all Reporting Entities, with a view to enhancing and streamlining these requirements across its entire supplier base, including through working with Nutrien Ag Solution’s overseas operations to ensure consistency with requirements globally.

Once the learnings from the pilot program have been assessed and any necessary changes identified, the new due diligence requirements will continue to be implemented in a staged approach and will comprise a risk-based, and holistic, approach to supplier due diligence incorporating Modern Slavery and related compliance areas such as trade sanctions and anti-bribery and anti-corruption.

2. Supplier Code of Ethics

Our Supplier Code of Ethics outlines the standards of behaviour expected of our suppliers. If a supplier fails to comply with the Supplier Code of Ethics, or if a supplier is not committed to improving its practices to ensure compliance with the Supplier Code of Ethics, then Nutrien Ag Solutions will review its relationship with that supplier. This review may result in remedial steps being taken by Nutrien, with consequences up to and including the immediate termination of our relationship with that supplier.

The Supplier Code of Ethics expressly deals with Modern Slavery. Each supplier must ensure, for example, that all components utilised in its supplied goods and materials do not contain metals derived from minerals or derivatives originated from conflict regions that directly or indirectly finance or benefit armed groups and cause or foster human rights abuses, and are acquired legally and meet legally regulated use requirements.

We expect all suppliers of goods and/or services to every Nutrien entity world-wide to comply with the Supplier Code of Ethics and we endeavour to include this expectation in supplier contracts. Each supplier must also comply with all applicable laws, regulations, and contracts that relate to the goods or services it supplies to Nutrien, promptly report any violations to Nutrien.

Notably, suppliers must:

- not directly or indirectly participate in any form of forced or compulsory labour;
- not require workers to surrender, as a condition of employment, any government-issued identification, passports, work permits or any other documents necessary for free movement and termination of employment;

- allow workers to leave work and freely terminate their employment (taking into account legal notice period requirements); and
- not directly or indirectly participate in any form of human trafficking.

3. Supplier Questionnaire

As outlined in the 2021 Statement, during the Prior Reporting Period, Nutrien Ag Solutions continued the development and roll out of a bespoke supplier due diligence program utilising a third-party platform to monitor and assess Modern Slavery compliance by key suppliers of goods and services to Nutrien Ag Solutions via a supplier questionnaire. Completed questionnaire responses will be used to inform future procurement decisions and to identify where further due diligence or remediation measures are needed.

Given the large number of suppliers of goods and services to Nutrien Ag Solutions, a risk-based approach has been taken to prioritise suppliers considered higher risk based upon criteria including: the geographic location of the supplier's operations, the nature of the goods or services supplied by the supplier, and the annual spend of Nutrien Ag Solutions on the goods or services supplied by the supplier.

During the Reporting Period, and in the lead up to the publication of this Statement, the roll out of the supplier questionnaire process commenced via a pilot program in accordance with the above risk-based approach. Suppliers who were selected to participate in the pilot program were provided with a link to a Modern Slavery questionnaire via a third party platform. A program of continuous improvement has also commenced, leveraging the results of the pilot program, allowing Nutrien Ag Solutions to monitor, track and encourage suppliers to uplift their Modern Slavery compliance measures via the introduction or amendment of specific actions over a 12 month period .

Going forward, Nutrien Ag Solutions will continue the roll out of the supplier questionnaire to its supplier base, as well as formalising the questionnaire review and response processes. Commensurate with the increased breadth of the supplier due diligence initiatives, the supplier questionnaire will be expanded to cover additional compliance risks such as trade sanctions and anti-bribery and anti-corruption.

4. Procurement Contracts

Our procurement teams work hand in hand with members of our legal department and the Integrity Group to ensure that our contracts appropriately manage supply chain risk. As outlined in the 2021 Statement, Nutrien has developed standard clauses expressly requiring supplier compliance with Modern Slavery, Anti-Bribery/Anti-Corruption laws and Nutrien's Supplier Code of Ethics and will incorporate these clauses in all template contracts and purchase terms going forward, if they are not already included. Further, our Legal department supports our endeavours to have these requirements included in executed supplier contracts wherever possible.

5. Assessing the effectiveness of our actions

Nutrien Ag Solutions will continue to explore key performance indicators (KPIs) that will help track the effectiveness of its actions to prevent and address the risk of Modern Slavery in our operations and supply chains. In future years, we will continue to gather, collate and act where appropriate, based on the information provided by our suppliers via questionnaires completed via the third party platform.

Going forward, Nutrien Ag Solutions will also measure effectiveness by the level of engagement with suppliers and tracking the completion of the actions set out in the following section "Going forward". The Nutrien Ag Solutions Corporate Integrity Committee, which includes representatives from various business units and functions will review the effectiveness of our Modern Slavery controls. As part of continuous improvement, Nutrien Ag Solutions will regularly review and update controls that will impact on Modern Slavery related risks.

6. Going forward

As part of its commitment towards continuous improvement, Nutrien Reporting Entities will continue to develop and improve procedures, requirements and risk assessment and monitoring frameworks that address concerns and any issues of Modern Slavery.

Over the course of 2023, our aim is to:

- increase awareness of Modern Slavery risks, particularly for Nutrien Ag Solutions employees who are more likely to engage with suppliers from 'higher risk' geographies and sectors;
- expand the completion requirements for the longer form Modern Slavery online training module, with a view to making this training mandatory for all applicable employees;
- continue to engage with our suppliers to better understand their supply chain risk, which we acknowledge is a complex and multi-jurisdictional issue;
- finalise the review and enhancement of our standard form contracts and documents to ensure that there are appropriate inclusions to meet minimum standard related to the mitigation of Modern Slavery risks;
- complete the implementation and continue the staged roll out of the expanded supplier questionnaire process and continuous improvement program, including by assessing the learnings from the completed pilot program and ensuring consistency with Nutrien's operations globally; and.
- continue to follow our robust recruitment process to ensure new hires meet all the employment requirements.

7. Consultation and approval

In order to prepare this Statement, we engaged with each of the Nutrien Reporting Entities and consulted with personnel in key divisions of the Nutrien Ag Solutions business.

This Statement has been reviewed, considered and approved by each director of the Nutrien Reporting Entities.

This Statement was approved by the principal governing bodies of Agrium Australia Pty Ltd and Agrium SP Holdings Pty Ltd on behalf of each of the Nutrien Reporting Entities and signed by Robert Clayton, Director of Agrium Australia Pty Ltd and Agrium SP Holdings Pty Ltd.
